

NCFE Mobile Application RFP Analysis

1. Executive Summary

What is the Client Trying to Achieve?

The National Centre for Financial Education (NCFE) seeks an experienced technology partner to design, develop, test, deploy, and maintain a secure, scalable, multilingual mobile application for Android and iOS, along with a comprehensive back-office administration platform.

What Business Problem Are They Solving?

Financial literacy initiatives often face accessibility challenges due to geographic, linguistic, and technological barriers. NCFE requires a mobile-first platform capable of delivering financial education content across India to diverse demographics through multilingual support, interactive learning, calculators, assessments, and offline accessibility.

What Is the Overall Project Objective?

To improve financial literacy nationwide through an engaging mobile platform that offers:

- Interactive learning content
 - Gamified assessments
 - Financial calculators
 - Certification mechanisms
 - Offline access capabilities
 - Centralized administrative monitoring and analytics
-

2. Client Information

Organization Name: National Centre for Financial Education (NCFE)

Industry/Domain: Financial Education / Government-Promoted Non-Profit Organization

Background Information

NCFE is promoted by India's leading financial regulators:

- Reserve Bank of India (RBI)
- Securities and Exchange Board of India (SEBI)
- Insurance Regulatory and Development Authority of India (IRDAI)
- Pension Fund Regulatory and Development Authority (PFRDA)

The organization serves as a key national institution for improving financial literacy and awareness across India.

3. Project Scope

Included Work

Design & User Experience

- UI/UX design
- Wireframing
- System architecture
- Interactive prototyping

Mobile Application Development

- Android application development
- iOS application development
- Native or cross-platform implementation

Administrative Platform

- Back-office management system
- User administration tools
- Analytics dashboard
- Content management functions

Content Management

- Multilingual content deployment
- Translation integration
- Learning content formatting

Deployment Activities

- Google Play Store publishing
- Apple App Store publishing
- Production deployment management

Post-Go-Live Support

- Maintenance services
 - Bug fixes
 - Feature enhancements
 - SLA support services
-

Expected Deliverables

The selected vendor must provide:

Technical Deliverables

- Complete source code
- Compiled application binaries
- System architecture documentation
- API documentation
- Database documentation

User Documentation

- User manuals
- Administrator guides
- Deployment procedures

Compliance Deliverables

- Security audit reports
- CERT-In compliance documentation
- Testing reports

Reporting Deliverables

- Usage analytics reports
 - Operational performance reports
-

Explicit Exclusions

Infrastructure Procurement

NCFE is expected to provide hosting infrastructure or define infrastructure requirements. The vendor is responsible for deployment, configuration, and management but not necessarily infrastructure procurement.

Content Creation

Financial literacy content is generally provided by NCFE. The vendor's responsibility primarily includes:

- Formatting
 - Digitization
 - Presentation
 - Delivery mechanisms
-

4. Functional Requirements

User Registration and Profile Management

Features include:

- User registration
 - Profile management
 - Multi-factor authentication
 - OTP login
 - Social login integration
-

Multi-Lingual Content Module

Support for:

- English
- Hindi
- Major Indian regional languages

The system should allow future language expansion.

Learning Management Features

Educational components include:

- Video lessons
 - Audio lessons
 - E-books
 - Text-based learning materials
 - Progress tracking
-

Interactive Quizzes and Assessments

Features include:

- Financial literacy assessments
- Gamification mechanisms
- Achievement badges
- Reward systems
- Scoring engines

- Automated certificate generation
-

Financial Tools and Calculators

The application should provide:

- EMI Calculator
 - Retirement Planning Calculator
 - Savings Calculator
 - Investment Calculator
 - Compound Interest Calculator
 - Inflation Calculator
-

Offline Functionality

The application should support:

- Offline content access
 - Local content caching
 - Offline calculators
 - Offline quiz functionality
-

Notification Engine

Communication features include:

- Push notifications
- In-app notifications
- User engagement alerts

Supported platforms:

- Firebase Cloud Messaging (FCM)
 - Apple Push Notification Service (APNS)
-

Administrative Dashboard

Capabilities include:

- User management
- Content management

- Analytics reporting
- Configuration management
- Report generation
- System monitoring

Special requirement:

- No unverified third-party plugins for critical reporting functions
-

5. Technical Requirements

Technology Stack

Acceptable approaches include:

Native Development

- Kotlin (Android)
- Swift (iOS)

Cross-Platform Development

- Flutter
 - React Native
-

Software Requirements

Backend systems should include:

- RESTful APIs
 - Relational databases
 - NoSQL databases (where applicable)
 - Scalable service architecture
-

Infrastructure Requirements

Infrastructure should support:

- Scalability
- Load balancing
- High availability
- Containerized deployments

- Virtualized environments
-

Hosting Requirements

Vendor responsibilities include:

- Deployment to NCFE-provided infrastructure
- Application configuration
- Store publishing management

Application Stores

- Google Play Store
 - Apple App Store
-

Integration Requirements

The system must integrate with:

- SMS gateways
 - OTP services
 - Email servers
 - Analytics platforms
 - Content Distribution Networks (CDNs)
-

Security Requirements

Data Security

- SSL/TLS encryption
- End-to-end secure communication

Credential Protection

- Android Keystore
- Apple Keychain

Security Standards

- OWASP Mobile Top 10 compliance
 - Secure password hashing
 - Salted credential storage
-

Compliance Requirements

Mandatory Security Audit

The application must successfully pass security assessment by a:

CERT-In Empanelled Security Auditor

Approval is required before production deployment.

6. Timeline and Milestones

Project Start

Immediately upon:

- Contract signing
 - Work order issuance
-

Key Milestones

Milestone 1

Requirements gathering and approval:

- System Requirement Specification (SRS)
 - UI/UX approval
-

Milestone 2

Development phase:

- Core application modules
 - Beta release
-

Milestone 3

Testing and compliance:

- Integration testing

- Multilingual implementation
 - CERT-In readiness
-

Milestone 4

Production deployment:

- Google Play Store launch
 - Apple App Store launch
-

Milestone 5

Project closure:

- Final acceptance
 - Annual maintenance commencement
-

7. Budget and Commercial Information

Budget

No fixed budget cap is publicly specified.

The procurement process follows competitive bidding.

Pricing Expectations

Vendors should provide:

Capital Expenditure (CapEx)

- Design
- Development
- Testing
- Deployment

Operational Expenditure (OpEx)

- Maintenance
- Support
- Enhancements

- SLA services
-

Payment Terms

Payments are expected to be milestone-based and linked to:

- Deliverable completion
 - Client validation
 - Formal sign-off
-

Contract Duration

Typically consists of:

Implementation Phase

Initial design and development cycle

Maintenance Phase

Post-implementation support typically lasting:

- 2–3 years
 - Extendable by mutual agreement
-

8. Resource Requirements

Role	Suggested Allocation
Project Manager	1 FTE
Business Analyst	1 Resource
Frontend Developers	2–3 Resources
Backend Developers	2 Resources
QA Engineers	1–2 Resources
DevOps Engineer	1 Resource

Key Responsibilities

Project Manager

- Project planning
- Stakeholder communication
- Risk management
- Progress reporting

Business Analyst

- Requirements gathering
- User story development
- Content structure analysis

Frontend Developers

- Mobile UI implementation
- Flutter/native development
- Accessibility implementation

Backend Developers

- APIs
- Database design
- Administrative dashboard

QA Engineers

- Device testing
- Security testing
- Integration testing

DevOps Engineer

- CI/CD pipelines
- Infrastructure deployment
- Store deployment automation

9. Risks and Challenges

Technical Risks

- Android device fragmentation
- Low-end device performance
- Offline synchronization complexity

- Multilingual rendering challenges
-

Timeline Risks

- App Store review delays
 - CERT-In audit cycles
 - Regulatory review feedback
-

Compliance Risks

- Security audit failure
 - Delayed production approval
-

Operational Risks

- Administrative portal availability
 - Data synchronization failures
 - Localization update issues
-

10. Evaluation Criteria

Selection Methodology

Quality and Cost-Based Selection (QCBS)

Typical weightages:

Component	Typical Weight
Technical Score	70–80%
Financial Score	20–30%

Technical Evaluation Areas

Organizational Capability

- Mobile development experience
- Similar project portfolio

- Application deployment history

Financial Stability

- Turnover
- Profitability
- Business sustainability

Resource Quality

- Team qualifications
- Certifications
- Domain expertise

Technical Solution

- Architecture quality
- Scalability
- Security approach
- Future readiness

Commercial Evaluation

The lowest qualifying commercial proposal receives the highest financial score.

Remaining proposals are scored proportionally.

11. Proposal Submission Requirements

Envelope 1 – Eligibility Proposal

Includes:

- Compliance documents
- Eligibility proofs
- EMD documentation

EMD Exemption

Allowed for eligible MSMEs upon submission of valid registration certificates.

Envelope 2 – Technical Proposal

Includes:

- Technical methodology
 - Project approach
 - Case studies
 - Resource CVs
 - Technology stack details
-

Envelope 3 – Financial Proposal

Includes:

- Detailed pricing
 - Cost schedules
 - Commercial terms
-

Submission Method

Proposals may be submitted through:

Physical Submission

NCFE Senior Manager Office

Navi Mumbai, Maharashtra

Electronic Submission

Approved e-tendering platforms as specified in the tender documentation.

Required Company Qualifications

The bidder must:

- Be a legally registered entity in India
 - Have positive audited financials
 - Have no blacklisting history
 - Meet all eligibility criteria defined in the RFP
-

12. Information Useful for AI Agents

CEO Agent

Strategic Value

This project is backed by India's major financial regulators and offers substantial visibility and long-term credibility.

Recommended Positioning

Emphasize:

- Institutional compliance
 - Security maturity
 - Proven delivery capability
 - Long-term sustainability
-

CTO Agent

Architecture Strategy

Recommended approach:

- Flutter-based cross-platform architecture
- Decoupled backend services
- API-first architecture

Security Priorities

- CERT-In readiness
- OWASP Mobile Top 10 compliance
- Secure coding standards

Platform Governance

Avoid dependency on unverified third-party plugins for critical reporting and analytics.

PM Agent

Delivery Strategy

Plan project timelines around:

- CERT-In audits
- Store approval timelines
- Multilingual testing cycles

Critical Focus Area

Offline content caching and synchronization should be validated early.

CFO Agent

Financial Strategy

Structure pricing to:

- Protect implementation margins
 - Balance maintenance profitability
 - Account for potential SLA penalties
 - Utilize MSME exemptions where applicable
-

HR Agent

Staffing Priorities

Secure resources with experience in:

- Flutter development
- Android/iOS deployment
- Security testing
- Government-sector implementations

A dedicated QA/security resource is strongly recommended.
